

14th November Update

It was a non-event in NSW (Newcastle) with zero Elite-Filter qualifiers.

It was a rare rain-affected track at Ascot where the going went from 7 to 9 with rain through the meeting. Under the circumstances it was a great effort to get his **10th straight \$200 Best Bet up** and keep that 100% record for those specials intact. Bet \$2,000, Return \$7,140.

I know many of you are obtaining massive leverage on the \$200 specials with all-ups.

Melbourne

We stopped the rot in the last with Elite-Filter bet Missile Mantra getting up by a nose and retrieving \$400 of the \$680 outlaid for the meeting.

Kemalpasa did the right thing for Larry's Best punters.

The Top-Rated Six Filters strategy re-started after the spring break and made a modest profit at Sandown with the wins of Hindaam \$5.40 and Kemalpasa \$3.70.

Colour Coding

Reference:

[Excel spreadsheet](#)
[pdf printout](#)

We are starting to build up some serious data for the Mel colour-coding with eight completed meetings over the past five weeks. We have colour-coded 76 races. Many of those were very tough, wide-open spring carnival races but the data is going exactly as we hoped.

A level \$1 on all 527 colour-coded runners so far has returned \$574.60. That's amazing but we certainly don't not recommend a bet on EVERY green/blue coded horse. It does demonstrate very strong base of value winning chances to work from.

Green

76 races for 311 individual green coded runners. 54 green winners of those races so 71% of the rated races were won by Green runners at average winning odds \$6.10.

\$100 level on the lot has made + \$1,820 net profit.

Blue

64 of the 76 races had blue runners for a total of 216 blue runners. 19 blue winners = 30% winners : races.

A level \$100 made \$2,940 net profit. The average winning odds is \$12.92.

Missed

We missed the winner in three of the 76 races (4%).

96% races with the winner is better than I would have expected especially as 22 of them were double figure winners.

Seven were \$20 or better!

20 of the 22 double figure winners were no surprise to Elite punters.

Strategy

We are still analysing with the view to developing a strong strategy based on the colour coding.

In the October 26th newsletter, we updated the results of a basic strategy to apply a filter to concentrate on just the races where we had **three or less green chances**. That plan was first presented early in October.
Pretty simple, if the race has 1, 2 or 3 green runners then back those green runners.

At that stage there were 17 qualifying races which had a total of 34 green bets.

11 winners @ \$4.75 so the net bottom line for \$100 win bet was

Bet:	\$3,400
Return:	\$5,230
Profit:	\$1,830
Profit %:	\$54%

Now (After 14th November Sandown meeting)

31 qualifying races with a total of 72 green bets.

21 winners @ \$4.72

Bet:	\$7,200
Return:	\$9,920
Profit:	\$2,720
Profit %:	\$38%

Sub Filters

Of course, as we get more data in we can more confidently add in sub-filters.

Example: **Apply the basic filter as above but exclude races where there more than FOUR blue runners.**

The results improve to:

20 qualifying races with a total of 45 green bets.

15 winners @ \$5.43

Bet:	\$4,500
Return:	\$8,150
Profit:	\$3,650
Profit %:	\$81%

That is exactly what you would hope. The more the blue chances the less reliable the race, even if there are only 1,2 or 3 green chances.

Date	Track	Race	Start err	Green	Blue	Total Coded	Winner	Green Winner	Blue Winner	Winner Missed	Elite Rated
10-Oct-20	Cau	3	8	1	4	5	Windstorm	1.80			1

Excel users can analyse much deeper using the interactivity built into the spreadsheet. Apply a filter and immediately see the updated results.

There is even a pivot table for further analysis. It is currently set to provide a day by day performance summary of the original plan with sub filters as above

	A	B	C
1	Green	(Multiple Items) ▾	← Check 1, 2 and 3
2	Blue	(Multiple Items) ▾	← Check 1,2,3,4 and "blanks" (ie zero blues)
3			
4	Date ▾	Green Bet	Green Return
5	10-Oct-20	\$ 2.00	\$ 1.80
6	14-Oct-20	\$ 5.00	\$ 16.00
7	17-Oct-20	\$ 8.00	\$ 15.60
8	23-Oct-20	\$ 8.00	\$ 8.80
9	24-Oct-20	\$ 5.00	\$ 7.40
10	05-Nov-20	\$ 6.00	\$ 9.70
11	07-Nov-20	\$ 3.00	\$ 12.00
12	14-Nov-20	\$ 8.00	\$ 10.20
13	Grand Total	\$ 45.00	\$ 81.50

Every day's a winner except day 1 (October 10th) which is virtually break-even. And remember, this analysis of our Mel colour-coding is through the spring carnival.

Watch this space!

Cheers

Larry
